

**The Practice of Hearing Management for Hearing Impaired Preschool  
Children in China  
Miaoyan**

[Abstract] With the implement of the hearing impaired children rehabilitation project national wide, most of the hearing impaired children can be detected, diagnosed and intervened at the early age. At the same time, the central finance have earmarked special funds to aid these hearing impaired children for their hearing rehabilitation. During the year 2011 to 2015, each year there were almost 10,000 hearing impaired children could receive hearing instruments for free. Due to the late start of audiology education, less professional, weak service capacity, hearing management is put forward to be the special support of the rehabilitation effect in the teaching reform for hearing impaired children. The clear requirements have been made for the connotation, service form, work flow, the responsibility of the staff and so on. The training has been emphasized and we have organized training for pediatric audiology, hearing aid fitting, cochlear mapping and training for rehabilitation teachers and parents. Because of our effort, the hearing aid fitting division has become a new career and national occupational standards has also been developed. In recent years through a series of practice, the services provided by hearing management is obviously strengthened, the professional ranks grow and the rehabilitation effect improved dramatically.
