

## Volunteers Helping You To Help Your Patients

This presentation tells the success story of the formation of a relatively new and fast-growing charitable organisation. Angel Flight facilitates free air transport for people with non-urgent medical needs and who may find normal government funded travel taxing or unavailable. These flights are provided by private pilots using their own aircraft at their own expense.

We will describe a few of the patients that we have carried and outline just how much of a difference the service has made to the lives of ordinary people. Funding will be discussed but we will not be insisting you to reach for your wallets! We will, however, show just how we can help you to help your patients.

The presentation will close with the showing of a 12 minute video covering one mission, flying a week-old baby from Kaitaia to Auckland for surgery at Middlemore Hospital.
