

## **MiTek® Sapphire™ design software**

MiTek® is the world leader in timber truss design software, truss engineering and connector plate manufacture. MiTek® has operations in 19 countries and is Australasia's market leader in timber truss design and manufacture using timber fabrication techniques.

MiTek Sapphire™ is a world first offering in next generation truss design software incorporating full 3D functionality and Building Information Modelling (BIM). By offering the ability to design and engineer within the 3D model MiTek Sapphire™ has taken the functionality beyond rivals as the first truss design software to employ this technology.

Our industry is absorbing technology in a drive for more value, greater design efficiency and better project communication. MiTek Sapphire™ is poised to help with the design software being made available for demonstration at the WCTE 2012 conference.
